

Kaizad V Avari

TLDR

Senior software engineer with deep experience building AI-enabled products across audio, automotive, mobile, and connected-device ecosystems. I'm known for going deep quickly, sweating the details, and approaching every project with a customer-obsessed mindset — thinking like a product manager and UX designer while still shipping robust, scalable software. At Amazon, I've helped bring Alexa+ and in-car audio experiences to life, blending LLM-powered intelligence, real-world user needs, and production-grade engineering into products people can actually enjoy. From my earliest Android apps to today's Alexa+ work, I've always been driven by the chance to create software that meaningfully improves how people live, work, and connect.

EXPERIENCE

Amazon (Amazon Smart Vehicles, Alexa)

Sunnyvale, CA

Software Developer

Sept 2021 – Present

- Architected and built Amazon's in-vehicle audio stack end to end for car OS, spanning media session APIs, React Native playback UI, and middleware integrations with Alexa Audio cloud services.
- Built media browse and Alexa+ AI capabilities for Alexa Custom Assistant on BMW vehicles, delivering new conversational and discovery experiences in the car.
- Shipped LLM-driven improvements to Alexa+ automotive utterances, improving the quality and usefulness of voice interactions for drivers.
- Developed internal LLM-powered agents and tooling that accelerated team workflows and improved how engineers built, evaluated, and used AI systems.

Blackrock

New York, NY

Software Developer

Jun 2017 – Aug 2021

- Implemented Kubernetes support for BlackRock's orchestration server, extending platform capabilities for containerized application workloads.
- Added translation and localization support to an automated report generation platform, enabling multi-language delivery for client-facing reports.
- Designed and developed web applications using Angular and NgRx, with a focus on maintainable state management and responsive user experiences.
- Built telemetry and observability using InfluxDB, Grafana, and Splunk to analyze application metrics and optimize server subroutines and supporting KPI and KRI dashboards for clients

Department of Anesthesiology, University of Florida

Gainesville, FL

Simulation Developer Assistant and Summer Intern

Jan 2016 – May 2017

- Built a Unity/C# mixed-reality simulator for anesthetic procedures.
- Developed a curriculum-based intelligent tutor for UF Shands resident doctors.
- Designed a modular simulation platform to accelerate creation of new training scenarios.

PROJECTS

Parsi Portal App

Developed an Android app and service to connect people of the Zoroastrian community over events and services. 40k users in 2 weeks.

Smart Helmet

Built a Bluetooth helmet with an accompanying Android app to prompt motorcyclists about select notifications, navigation updates, music & more.

Smart Lighting

Built a relay circuit and accompanying Android application to demonstrate smart lighting in 2013! Won a local electronics competition.

EDUCATION

UNIVERSITY OF FLORIDA

Master of Science, Computer Science

UNIVERSITY OF MUMBAI

Bachelor of Engineering, Information Technology
